TRAIN RESEARCH DATA MANAGEMENT - RIGHT FROM THE START!

Do you want to promote research data management (RDM) at your institute? Perhaps even in the early stages of academic career? Would you like to impart theoretical and practical skills at the same time?

The ExU project **DORA4KIT – Data Literacy** is a pioneer in **developing digital learning scenarios for research data management** at KIT. The first customized learning module has currently been developed and will be launched this winter semester (2021/22). Coming up are further **basic and advanced learning modules** and an associated **learning platform**.
